

TPS for Business

By Hassan Abioye, Elizabeth Nowak, Merrick,
Kahasim Brown, Ane Jademi

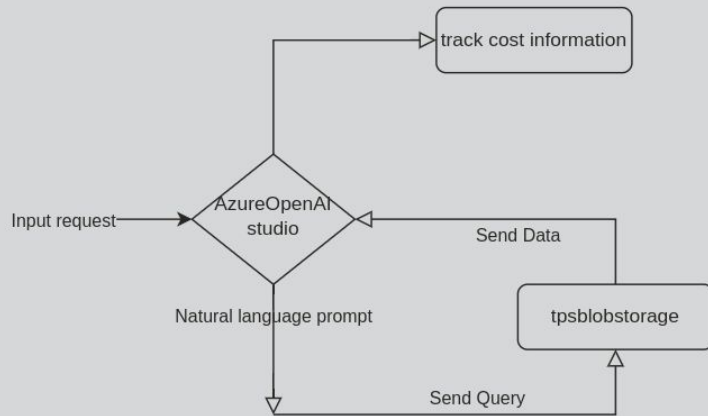

Summary

Introducing TPS: Token Positioning System

Purpose: To track and manage costs associated with verbal database queries.

Goal

- ❑ Set up natural language prompts to query database
- ❑ Collect the costs of usage and data surrounding their usage
- ❑ Send the above information to a secondary table to simplify cost management

Repo

<https://github.com/habioye/Azure-Innovation-Challenge>

```
{messages.map((message, i) => [
  <div className="chat">
    <img className="chatImg" src={message.isBot?chatbot:user} alt="" />{" "}
    <p className="txt"> {message.text}</p>
  </div>;
]}]
</div>
<div className="chatFooter">
  <div className="inp">
    <input
      type="text"
      name=""
      id=""
      placeholder="send a message"
      value={input}
      onChange={(e) => {
        setInput(e.target.value);
      }}
    />{" "}
    <button className="send" onClick={handleSend}>
      <img src="" alt="Send" />
    </button>
  </div>
</div>
```

```
<div className="main">
  <div className="chats">
    <div className="chat">
      <img className="chatImg-aibot" src={chatbot} alt="" />{" "}
      <p className="txt"> Hello I am Azure AI and I will give you useful information about the data source.</p>
    </div>
    <div className="chat">
      <img className="chatImg-user" src={user} alt="" />{" "}
      <p className="txt"> Hello azure ai what is the country with the highest temperature. </p>
    </div>
  </div>
</div>
```

Authentication Not Configured

This app does not have authentication configured. Please add an identity provider by finding your app in the [Azure Portal](#) and following [these instructions](#) .

Authentication configuration takes a few minutes to apply.

If you deployed in the last 10 minutes, please wait and reload the page after 10 minutes.

System assigned

User assigned

A system assigned managed identity is restricted to one per resource and is tied to the lifecycle of this resource. You can grant permissions to the managed identity by using Azure role-based access control (Azure RBAC). The managed identity is tied to the resource ID, so you don't have to store any credentials in code.

Permissions ⓘ

Azure role assignments

This resource is registered with Microsoft Entra ID. The managed identity can be configured to allow access to other resources. Be careful when making changes to the access settings for the managed identity because it can result in failures.

Lessons Learned

Connecting to Azure involves multiple steps across various components—backend, frontend, data, and AI chatbot. Each of these requires its own instance, incurring separate costs. Instances can be created and attached individually, emphasizing the need to plan for both setup complexity and budget management.

Access management is a key ingredient to Azure resource management. Without proper access, no management is possible, including cost oversight.

Mentors are necessary, but they should be made aware of the different projects and be prepared to guide or help specifically.

Azure AI Studio and Azure OpenAI Studio do not work the same.

Creating web apps and SQL servers is not the same as deploying a web app or a SQL database in Azure resources.
